and durability**

Dynamic 3D Ø 20 mm
elegant balance between aesthetics and durability

SFS intec

The SFS intec universal hinge for eurogroove welcomes a new model. Version Ø 20 mm becomes part of this successful range.

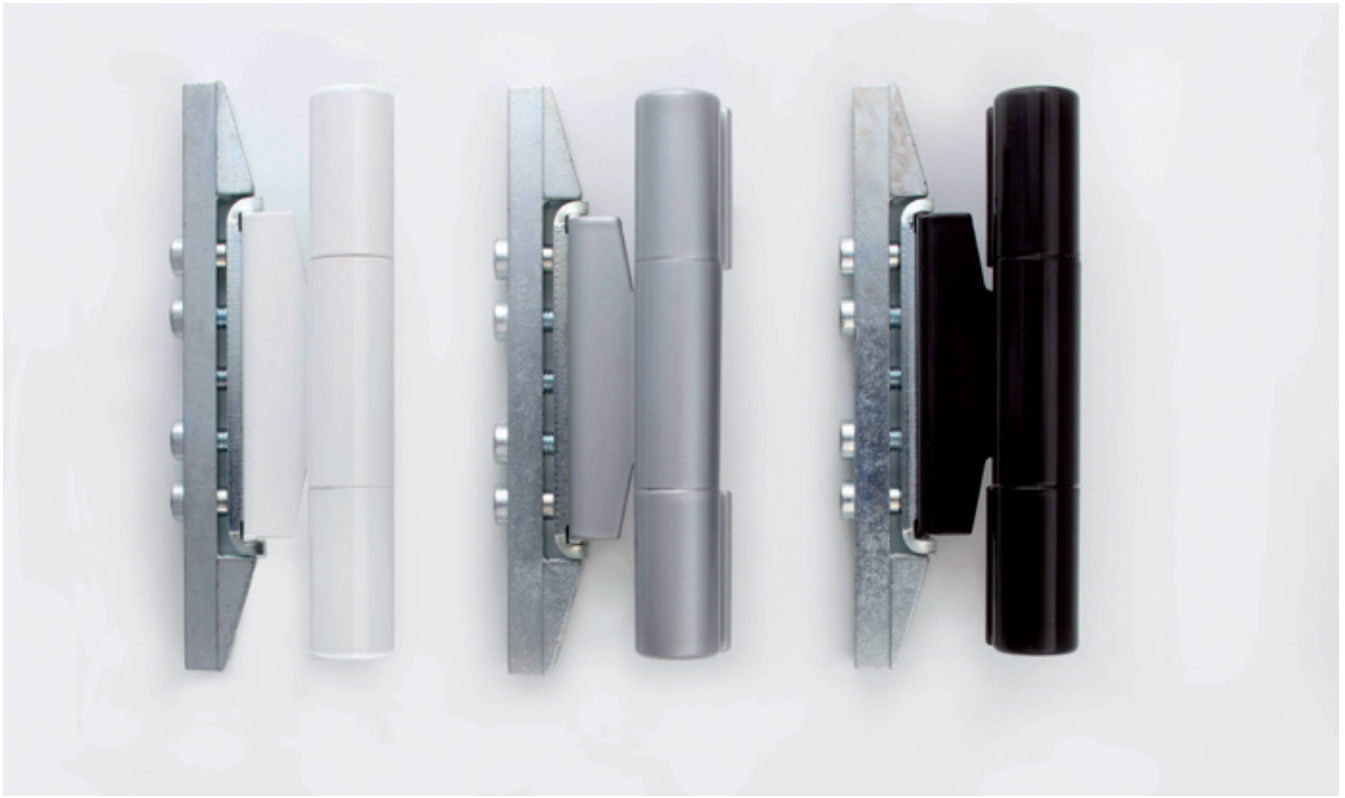

The new Dynamic 3D Ø 20 mm has been designed to meet the requirements of entrance door producers who require hinges with up to a 160 kg capacity. This solid and elegant hinge produced in two versions, one for 16 mm grooves and the other for 20 mm grooves, is produced with all exposed steel parts which ensure durability and applicability on fire doors.

Dynamic 3D Ø 20 mm is composed of three rings with a single connector pin which keeps the hinges perfectly aligned and self-lubricating bushes which ensure lasting and even sliding movements over time.

Adjustable in three dimensions (+/- 4 mm in height, +/- 3 mm horizontal and +/- 2 mm gasket pressure), with a 4mm single Allen key, this efficient hinge stands out for its quick and easy installation, thanks to the availability of a special drilling jig but also to have easily passed quite rigid durability tests performed by SFS intec established in 200,000 movements on 160kg doors.

Dynamic 3D Ø 20 mm is available with powder coated finishes in a range of colours for an easy personalisation of the final product.

Ordering codes for 16 mm Eurogroove	Finishing	Packaging
1418380	White	3 pcs
1430482	Pearl White RAL 1013	3 pcs
